

10/803,012

1-9. (CANCELED)

10. (CURRENTLY AMENDED) A luminescent signage component[[,]]
comprising:

a one piece body in the form of a sign plate having a first face and a
second face;

at least one cavity in the body defining one of alpha-numeric indicia or
graphic indicia, the at least one cavity being closed by an integrally formed transparent
window positioned across the second face;

luminescent epoxy filling the at least one cavity, such that the one of
alpha-numeric indicia or graphic indicia emits a luminescent glow in the event of a
power failure, ~~the transparent window enabling the luminescent epoxy to be backlit by~~
~~a light positioned behind the body.~~

11. (WITHDRAWN) A luminescent signage component, comprising:

a body in the form of a molding;

at least one cavity in the body;

luminescent epoxy filling the at least one cavity, such that the luminescent
epoxy emits a luminescent glow in the event of a power failure, and

the at least one cavity having a light reflecting coating, thereby facilitating
charging of the luminescent epoxy.

12. (WITHDRAWN) The luminescent signage component as defined in
Claim 11, wherein the molding is a door molding for an exit door.

10/803,012

13. (WITHDRAWN) The luminescent signage component as defined in Claim 11, wherein the molding is a chair rail molding with graphic indicia adapted to point toward an exit door.

14. (WITHDRAWN) A luminescent signage component, comprising:

a transparent tubular body;

a cavity in the body in the form of an axially extending bore;

luminescent epoxy filling the cavity, such that the luminescent epoxy emits a luminescent glow through the transparent tubular body in the event of a power failure.

15. (CURRENTLY AMENDED) An exit sign[[.]] comprising:

a sign enclosure;

a light mounted in the enclosure;

a one peice sign plate mounted in the enclosure, the sign plate having a first face and a second face, at least one cavity in the sign plate defining alpha-numeric indicia, the at least one cavity being closed by an integrally formed transparent window positioned across the second face, the alpha-numeric indicia of the sign plate bearing letters spelling the word EXIT, luminescent epoxy filling the at least one cavity between the first face and the second face resulting in the letters being formed with the luminescent epoxy, the sign plate being backlit by the light, the ~~transparent window enabling the luminescent epoxy to be exposed to the light~~ positioned behind the sign plate such that the light illuminates the letters and activates the luminescent material so that the letters EXIT give off a luminescent glow making them visible when power to the light is disrupted.

16. (CANCELED)
